MoCa (Montreal Cognitive Assessment) Test for Dementia
Oct 20, 2020 · Montreal Cognitive Assessment scoring is based on a 30-point scale, with points awarded differently depending on the type of question asked. For instance, you can earn one point for each animal you identify in a picture, but listing the names of 13 fruits in under a minute gains you only two points.

Montreal Cognitive Assessment (MoCA)
Version 8.1
The Montreal Cognitive Assessment (MoCA) was designed as a rapid screening instrument for mild cognitive dysfunction. It assesses different cognitive domains: attention and concentration, executive functions, memory, language, visuoconstructional skills, conceptual thinking, ... 

FAQ | MoCA - Cognitive Assessment
Is there a cut-off score between mild cognitive impairment (MCI) and Alzheimer’s disease (AD)? The cut-off score of 18 is usually considered to separate MCI from AD but there is overlap in the scores since, by definition, AD is determined by the presence of cognitive impairment in addition to loss of autonomy.

Montreal Cognitive
The Montreal Cognitive Assessment (MoCA) is a brief cognitive screening test with high sensitivity and specificity for detecting Mild Neurocognitive Disorder / Mild Cognitive Impairment (MCI). The MoCA is particularly useful for detecting cognitive changes in those with higher levels of education, or where mild cognitive changes are the primary clinical concern.
