Using a growth-accounting methodology, it distinguishes the sources of growth by the accumulation of factors of production and changes in production intensity or efficiency. Private capital is found to be particularly important to growth, but human capital appears not to be significant. The paper also identifies the terms of trade, trade openness, the government deficit, and the share of government investment in total investment as key policy variables affecting growth.

There is now a recognition that many variables contribute to a country's worth, which make accurate measurement difficult. Looking beyond GDP by focusing on human capital, researchers, policymakers, government economists, and students of international development have all realized that what elements of the Institute for High-Impact Human Capital deliver measurable value in the face of ongoing challenges that are not going away.
